- Schad discloses an optical component includes an anisotropic layer of cross-linked liquid crystal monomers with varying local orientation of the liquid crystal molecules. The liquid crystal layer is in contact with an orientation layer comprising a photo-orientable polymer network (PPN). A method of making includes orienting the liquid crystal monomers by the interaction with the PPN layer and subsequently fixing the molecules by cross-linking (abstract). Suitable PPNs are described by generic formulas PPN1, PPN2 and PPN3 in col. 2 and 3:

Art Unit: 1713

The generic formula (I) presented in the instant claim 1 that allows a wide variety of permutations for all groups, for example A is carbon or substituted carbon, , M is a repeating monomer unit, such as ones presented by -- []---_n of Schad, one or more of n1, n2, n3 or n4 is zero, P1-P3 are photoactive groups, denoted as aromatics or maleimide derivatives as seen in Schad, B1-B4 are spacer groups, which can be anything from the single bond to any compounds, as allowed by permutations described

in the instant claim 1 (note that n_4 and n_5 can be independently zero). (page 70, lines 1-5).

Therefore, a person skilled in the art would have found the obvious analogy between generic formulas of the instant claims under certain permutations in light of more specifically described compounds of Schad.

Allowable Subject Matter

4. Claims 12 and 13 are allowable over the prior art of record.

No prior art of record discloses or suggests specific compounds identified by the instant claims 12 and 13.

Response to Arguments

5. Applicant's arguments filed July 31, 2003 have been fully considered but they are not persuasive. The crux of Applicants' arguments appears to hinge on the structures PPN1, PPN2 and PPN3 that allegedly have the linear structure compared to the branched structure of the claimed polymers, and that the polymers of Schad do not have at least two photoactive groups.

In response to this, Applicants attention is called to a polymer denotes as PPN1, wherein the repeating monomer unit M, (in the examples the double bond is already broken), has two photoactive substitute groups attached to it, and taking into consideration an enormous breadth of claimed compounds and myriads of permutations

allowed by Applicants, a person skilled in the art would have found Applicants' genus obvious over Schad's disclosed species.

6. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
